

# HSE Safety Alert

U.S. Pipeline, Inc.

<b>Date:</b>	April 13, 2017
<b>Situation:</b>	Load securement for loads with potential to roll on trailer
<b>Notification to:</b>	All USPL Employees

Trailers used to haul pipe (line pipe, casing, culverts, or any other material with the potential to roll on the trailer) are required to have cradles/cribbing and stakes immediately available for securement purposes. To prevent the unwanted roll of such materials, the cradles/cribbing and stakes will be used to prevent this release of energy.

***Prior to the loading of such materials***, the driver will be responsible for correct placement of the stakes and cradles/cribbing. The Competent Person on site will verify that these safety items are in place and secured properly before loading operations can commence.

Below are examples of stakes, cribbing/cradles on trailers utilized for roll prevention.
