LESSON LEARNT

PREPARED BY: Corporate QHSE Dept.

N°	10/2018	Date:	October 2018

OBJECT	SEATBELT USE VERIFICATION

One of the main causes of injuries sustained as a result of road accidents is the failure to use seat belts.

Failure to use the seatbelt can result in serious consequences not only to yourself but also to the other passengers of the vehicle - ex. impacts caused by rear seat passengers without the seatbelt.

Therefore, to ensure that all passengers of a vehicle for personnel transport have their seatbelts fastened before departure, each driver must complete a checklist that has been developed to record the successful verification.

IMPLEMENTED CORRECTIVE ACTIONS:

- Training to all drivers on the use of seatbelts;
- Awareness to all employees on the importance of wearing a seatbelt for all passengers of a vehicle;
- Implement a specific form for checking the use of seatbelts during all journeys of all vehicle for personnel transport, that includes:
  - Date; Journey; N° of passengers; driver's signature (and HSE supervisor's signature, if present) that performed the verification.

HSE FORM

CONTROL OF THE USE OF SEATBELTS

Day	Journey		N° of Passengers	Signatures of responsible for the verification (Driver = mandatory; HSE = if present)		Note
	From	To		Driver	HSE Supervisor	

It is the obligation of the driver of the vehicle to verify that all occupants use the seatbelt: do not switch the vehicle on until this requirement is met.

THINGS YOU DO NOT KNOW ABOUT SAFETY BELTS (Publication of the transportation department of Colorado (USA) for the "Beware the beltless" campaign - attentive to those without a seatbelt).

1. Even traveling slowly will not help you: crashing at only 40 km/h is like falling from a second floor window.
2. Attention to the human "demolition ball": even if you fasten your seat belt correctly, if someone else in the vehicle is not properly secured, he should impact you during an accident and cause mortal wounds or inability and dependence on friends or family for the rest of your life.
3. The back seat will not save you: on the back seat you are no longer sure than on the front seat.
4. Out of here ... ... and not in a good way: being without a seatbelt increases by 30 times the chance of being thrown out the vehicle: if this happens the chances of survival become very small.
5. Common sense is not always so common: a quarter of people who do not wear seatbelts believe that "seatbelts" do not "improve safety".

Helps to share the message. A convinced person could be a saved life.
