PIPELINE APPLICATION

# The Complete Pipeline Reporting Tool

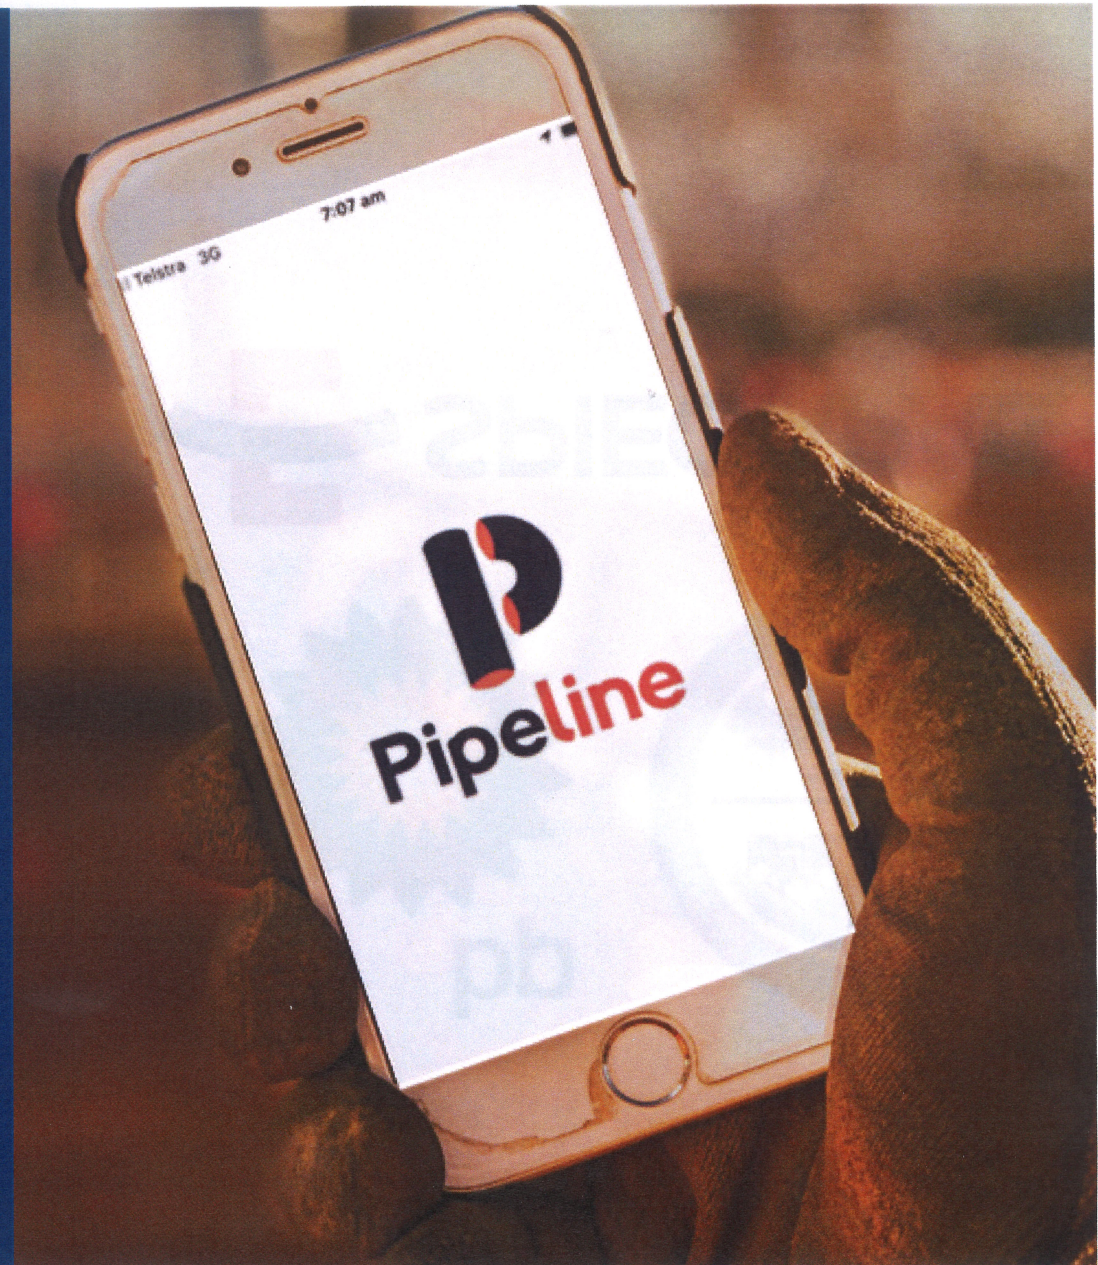

Spiecapag's Pipeline App allows people to quickly and efficiently complete reports related to Pipeline Construction activities and to retrieve pertinent information that will assist them with doing their jobs.

It eliminates human error by utilizing barcode systems and only allowing the user to select fields appropriate to the task. For example qualified welders attributed to the WPS

The software can be fully customized to ensure all aspects of specifications and ITP's are captured in the reports

The Complete Pipeline Reporting Solution

# Efficiency

The app has massively improved efficiency on our projects.

It automatically generates weld books and coating books and sync's with the cloud based system whenever in range.

The supervisors have all key information with them in the system, they can look up:

- Pipe's available in each laydown (including sizes, SMYS etc)
- Landowner requirements
- Up to date Engineering Line List
- Progress of other crews
- Pipe numbers at Tie-Ins
- Outstanding Coating, NDT and Repairs
- Defects identified on pipes
